1.1 /// BRAND **RECOGNITION**

Our team brainstormed a vision and mission statement in order to make our marketing path a clear and a successful one. We wanted our brand to be easily identified by our primary target audience. We had to remain persistent through all our marketing channels and elucidate an 'Infinity atmosphere' while promoting the the F1 in Schools competition as well.

- **Mission Statement:** Fueled by passion, our F1 in Schools team excels in project innovation while upholding integrity and sustainability. We aspire not only to achieve top-tier results, but also to kindle and share our fondness for STEM with others, encouraging them to explore and embrace the exciting possibilities within this field.
- **Vision:** Our vision is to reach the pinnacle of success, standing proudly atop the podium. We will achieve this by giving our all, embracing teamwork and innovation–the core of our team's values.

The three pillars of our philosophy were followed and carried out through our entire project. We were innovative with our car, invoking new designs in every part of it. We practiced clear communication within our team, resulting in effective and efficient teamwork. Additionally, we made efforts to persevere in all aspects of the competition to achieve the best outcome by incorporating and implementing these ideas throughout our project deliverables. With a strong yet easily identifiable brand identity, graphic features and a theme, we began to transfer our mission and vision statements into reality by creating a strong marketing suite. Hence, we achieved a substantial presence within the F1 in schools community.

IMPROVEMENT & STRATEGY

As we progressed from the National Finals to the World Finals, our team devised a strategic plan to enhance the marketing aspect of the competition. Drawing from our experience in the National Finals, we scrutinised various insights concerning our team's marketing strategies. During the National Finals, we concentrated our marketing efforts on a specific demographic, which limited the exposure both for our sponsors and our team. In preparation for the World Finals, our objective was to broaden our reach and prioritise engagement outside the community. With our presence spanning across a range of social media platforms, we aimed to tap into a larger audience, thereby benefiting our team, sponsors, and expanding the scope of the competition.

1.2 /// MARKETING **GOALS**

Promote F1 in Schools as the world's largest STEM competition for an increase in the overall student participation in order to boost , STEM education, our team, and the competition to an array of audiences by captivating on their interests in the field.

Helping to create a wider audience for STEM by promoting this form of education amongst females and underprivileged sections of our society and community for a brighter future.

Engaging with our supporters and followers through the course of the competition to provide constant updates regarding the competition as well as the team, aiding in marketing of our team and F1 In Schools via a range of marketing materials and content.

Return on investment for our sponsors (In-kind & Monetary sponsors) benefiting them via our various marketing platforms. Creating marketing materials showcasing the team's potential aligning with our sponsor's values and goals.

Increase brand awareness by showcasing the team name, team logo, members, graphics and overall image of our brand to a greater and wider audience at constant small intervals on our marketing platforms.

1.3 /// TARGET **AUDIENCE**

TARGET AUDIENCE	AUDIENCE CHARACTERISTICS	MARKETING FOCUS	GOALS ACHIEVED
Students	Age: 9-19 years Gender: Male & Female School Communities	▸ Digital Media ▸ Students in our school	
F1 In Schools Competitors	Age: 9-19 years Gender: Male & Female International	▸ Digital Media ▸ Seminars ▸ Pit Display	
Sponsors	Age: N/A Gender: Male & Female Brand Alignment	▸ Digital Media ▸ Team Updates (At intervals)	
Public	Age: N/A Gender: Male & Female Interest in STEM, Motorsport	▸ Digital Media ▸ Promote STEM Engaging content	

1.4 /// MARKETING **SIPHON**

The marketing siphon is a tool we used to visualise how to transform business leads into our engagers. It was imperative for us to understand the journey of being someone on this marketing siphon by placing ourselves in their position. Being an F1 in Schools team, our marketing programmes were primarily focused on building the competition's brand as well as our team's brand identity, and eventually seeking sales. Thus, this tool helps to express the journey of a follower:

UNAWARE → AWARE → INTRIGUED → FOLLOWER → PARTICIPANT

GOING FURTHER...

Phase 1 : Unaware

The individual is unaware of the competitions existence and has not yet made any contact or had any exposure to the global event's activities. It is crucial for us to capture their attention and introduce the competition effectively through our various marketing platforms and methods, introducing them to the F1 in Schools competition.

Phase 2 : Aware

We strive to create awareness about the competition and the team through multiple channels. Whether it's through word of mouth, captivating social media platforms, or targeted marketing campaigns, we aim to make a lasting impression and pique the individual's curiosity, making them aware of the competition and our brand identity.

Phase 3 : Intrigued

The viewer has become interested in the competition, and our team as well, after learning about it through our various marketing channels. They are curious about the competition and our team and we aim to pique their interest through compelling content. The chances one follows our team and participates in the competition are now significantly higher.

Phase 4 : Follower

The viewer has actively started following the competition and now the team too, staying updated with the projects progress. They eagerly consume our content, interact with us on social media, and show genuine enthusiasm for our activities.

Phase 5 : Participant

At this final phase, the viewer has transformed into a dedicated member of the F1 in Schools community and is interested in participating in the competition. They not only follow us but also actively promote the competition and our team, sharing our content with others and participating in events that are committed to the competition mission.

MARKETING CAMPAIGNS

We figured out that a big event would require a large reach too. Infinity Racing held numerous marketing campaigns to increase the competition's awareness and ultimately market for the team and STEM education. Our Marketing Campaigns were aligned with our Marketing Goals and catered to our specific target audience. Our main goal was to increase our outreach and adapt our strategies to target each marketing goal effectively by promoting the competition.

2.1 /// STEAMING AHEAD **PODCAST**

GOALS ACHIEVED

We took the initiative to host the STEAMing ahead podcast series, engaging with F1 in Schools teams globally, accessible on Spotify. These podcasts significantly bolstered our marketing efforts through various means. Firstly, fostering connections with other teams proved mutually advantageous as they formed our primary target audience. Our discussions delved into vital topics, attracting considerable viewership from teams seeking solutions to common challenges. Consequently, our interactive and informative sessions garnered appreciation from invited guests and the F1 in Schools community alike, expanding our team's recognition amongst fellow competitors.

The success didn't stop there; promoting the podcast across social media platforms piqued the curiosity of the general public, with 18-24 year-olds from Bombay, India, showing particular interest in the world of motorsport. This extended engagement with a broader audience solidified our standing within the F1 in Schools ecosystem and greatly contributed to achieving our team's marketing goal of promoting the F1 in Schools competition to the general public, thereby encouraging increased global participation.

/// Figure 1.1 | Image of our podcast with Team Savitr. (Credit: Infinity Racing)

2.2 /// INFINITY **FEST**

GOALS ACHIEVED

The Infinity Fest provided a platform for our team to showcase our project to a larger audience. It allowed us to present our project to a diverse audience, including potential merchandise customers, investors, industry experts, and the general public. Professionals who we interacted with at the event provided us with helpful insights and criticism to better the overall progress of the team. The Infinity Fest was focused in a way to provide a STEM platform to a younger audience, encouraging them to participate in the F1 in Schools competition. This was done by showcasing our entire project and primarily our National Finals car since it piqued the audience's interest. The entire event was conducted to give the wider audience an understanding of STEM and the world of F1 in Schools. Through the fest, STEM and F1 in Schools were marketed in front of a large audience whilst building a strong identity of our team.

/// Figure 1.2 | Image of our Infinity Fest event (Credit: Infinity Racing)

2.3 /// SUSTAINABLE **MARKETING**

GOALS ACHIEVED

Our products provided sponsors with an exceptional platform for marketing, boosting their ROI. We prominently displayed sponsor logos on the back of hoodies and on our posters. This ensured brand exposure to both the wearer and the observer. Even a single sale of our items significantly enhanced sponsor brand awareness, as it would gain more reach every time it was worn. Our merchandise was sold using the print on demand method, meaning products were only printed upon purchase, eliminating the need for large upfront inventory investments and handling logistics. This not only saved substantial capital but also aligned with our sustainability goals by preventing the wastage of any deadstock.

/// Figure 1.3 | Our digital media posts on our EcoInfinity campaign. (Credit: Infinity Racing)

2.4 /// INNOVATIVE **MERCHANDISE**

GOALS ACHIEVED

We formulated two books, one on sustainability and the other on design of the car, showcasing two critical aspects of the competition, with the main purpose being to help out beginners in the competition and market the components of the F1 in Schools challenge. Majority of the buyers of this product were newcomer F1 in Schools teams and students interested in STEM. This helped to spread awareness of the competition and our brand to a large market which ended up forming the core of our target audience for this book. This was also incorporated in our merchandise highlighting the team brand and the concept of sustainability by introducing reversible clothing.

/// Figure 1.4 | Mockups of our merchandise for marketing. (Credit: Infinity Racing)

2.5 /// INFINITY **JUNIOR**

GOALS ACHIEVED

Infinity Juniors was another project we worked on together as a team. This is where we mentored rookie teams who had just begun their project, and wanted help from our team as we reached the World Finals, and were hence a reliable source of knowledge. We promoted our sponsors through this campaign as well by speaking to young teams about how our partners benefited us and encouraged them to seek partnerships. This project enhanced our marketing efforts by significantly increasing brand visibility through engagement with young teams and fellow F1 in Schools competitors.

2.6 /// STUDENT **PRESENTATIONS**

GOALS ACHIEVED

Each member of the team being from a different school helped us achieve an extremely large outreach. We presented the F1 in schools competition to our peers, encouraging them to take part themselves. This also increases our following as a team by enhancing our outreach. We successfully inspired three teams to participate in the competition, effectively highlighting STEM education and the F1 in Schools project in India, along with the significance of this competition. We engaged with over 1,200 students from the top six schools in Mumbai, promoting F1 in Schools participation and fostering STEM interest within the city.

SPONSORS & PARTNERS

MONETARY SPONSORS

LUCKY ENCOURAGING INNOVATION | INFINITY Premium Motoring CARS | RAYO RACING

IN-KIND SPONSORS

Ansys | FORGE 3D | ABEC 357 | KeyShot

3.1 /// SPONSORSHIP **STRATEGY**

We figured the entire F1 in Schools project required sizeable funds, hence finding monetary support in the form of sponsorships was critical for the completion and success of the project. We also acquired In-Kind partners who helped support the project and reduced the total cost of the entire competition.

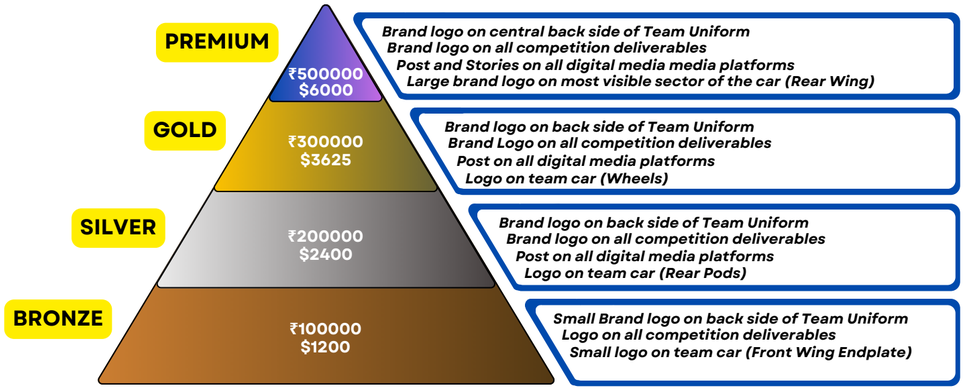

In order to obtain sponsors in an easier manner and alleviate the pressure for raising funds, we developed strategies to reach out to potential sponsors and conclusively finalise In-kind and Monetary sponsors. This included defining a target audience and reaching out to sponsors who share a similar brand identity as ours. Creating a compelling and attractive Sponsorship Proposal with a choice to select a tier of sponsorship was an apt strategy as well. Lastly, we fostered long time partnerships with our existing sponsors which was a key factor that most companies found benefitting, leading to a continued partnership.

3.2 /// RELEVANT **SPONSORS**

Finding relevant sponsors were crucial for the team's fundraising. We approached fields of businesses relating to the F1 in Schools field. This involved enterprises interested in Formula 1/Motorsport or STEM. Not only this, but our team also approached businesses who had a similar brand identity as ours or who shared a common vision with our team. A brand which shared a goal to achieve sustainability was also approached by our team in seek for a sponsorship. Lastly, we communicated with companies who we had close contacts with since this required minimum communication to confirm a sponsorship. These were considered as relevant sponsors to our team and were potential sponsors whom we approached at the earliest.

3.3 /// SPONSOR **HIERARCHY**

In order to make the classification of our sponsors as simple as possible, we created four standard sponsorship packages amongst which our sponsors could select any one. The ROI provided by the team was dependant on the tier chosen by the partner, increasing with an increase in the total amount funded towards the team. The hierarchy present in our proposal clearly details the benefits present at every stage of sponsorship and this helps deliver clarity to sponsors who will now be sure of exactly what perks they would gain by being a sponsor of our team. It ranges from a Premium sponsor at the top of the hierarchy, receiving the absolute maximum ROI possible for their firm, followed by the Gold, Silver and finally Bronze which will be promoted only on a small range of platforms.

3.4 /// MAINTAINING **SPONSORSHIPS**

We took several measures to maintain engagements with our sponsors. Although the sponsorship was confirmed, maintaining engagement with each of our sponsors was crucial, especially to foster long and healthy relationships with all the enterprises.

We started off with communication and engagement initiatives to each sponsor's requirements and needs and took the effort to comprehend their objectives, target market, and areas of interest. Secondly, we updated our sponsors on the activities, occasions, and achievements of our team. We also shared any pertinent trends, success stories, or breaking news. Our sponsors receive the credit they merit. On our website, social media pages, event materials, and in any pertinent media coverage, and made sure to prominently display their sponsorship.

Moreover, sponsors were given monthly Status Reports on the progress of the team through the project. This acted as a major component of maintaining engagement and monthly interactions with sponsors and partners.

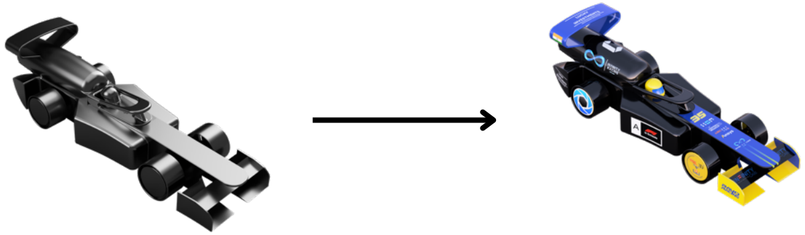

3.5 /// RETURN ON **INVESTMENT**

When we approached firms with our proposal, we outlined that a sponsorship with Infinity Racing is not unidirectional. This suggested that we would benefit the sponsor in all possible manners in terms of leverage opportunities as Return on Investment. This aided in acquiring sponsors and added as a beneficial sponsorship strategy.

We offered different Return on Investment opportunities to each tier of sponsors mentioned in the Sponsorship Hierarchy. More opportunities were given to a higher tier of sponsors in return for a larger sum. Although we did offer basic logo placement on our project deliverables, we also thought of distinct and creative ROI ideas which could benefit an enterprise in a manner which suited their brand and which could result in being more profitable for the sponsor.

While approaching sponsors, we realised most companies were interested in placing their firm's logo on our car. Since the car was the most visible part through the competition, we offered prominent places on our car for sponsors. We did the same for our digital media handles. Companies were interested in having a permanent existence on our social media pages. We offered a story that could be installed on our National Final story highlight. This would keep the post of the company on the top of our social media page, which would grab the viewer's attention in an instant and acted as an advantageous Return on Investment opportunity for our sponsors. Along with this, we offered to also market our sponsor's brands by placing their logos on our team merchandise since merchandise was showcased on our Pit Display and always captivated the viewer's attention. These creative Return on Investment methods were only offered if the firm would largely aid us in terms of monetary support.

We gave our sponsors maximum exposure in all our Return on Investment opportunities. This helped in marketing of our sponsors to a wide audience especially since we were competing at a national level.

/// *Figure 2.1 | Placement of logo on team car based on sponsorship (Credit: Infinity Racing)*

4.1 /// LEVERAGE **OPPORTUNITIES**

We identified the areas where the goals and interests of our sponsors and our team were compatible. We also looked for chances to cooperate and provide benefits for both parties. For example, cooperative marketing programmes, co-branded advertising campaigns, or shared content production. We also planned several events to support leverage.

LEVERAGE EXECUTION

- Logos on digital media platforms

  Sponsors gain more visibility and exposure to our audience when their brand is prominently displayed on our digital media channels. This exposure can assist our sponsors in growing their market presence, expanding their audience, and improving brand recognition.

/// Figure 3.1 | Digital media posts focusing on our sponsors and their support. (Credit: Infinity Racing)

- Podcast - STEAMing Ahead

  We hosted multiple projects with teams from around the globe. We spoke about sponsors we gained during our process which brought them brand visibility. We also brought to light how they benefited us and how we related to their brand identity.

/// Figure 3.2 | Evidence of our podcast, STEAMing Ahead on Spotify, where we speak about our sponsors and their support. (Credit: Infinity Racing)

- Events

  We hosted Infinity Fest 2023 which was a STEM based fest. During the fest we interacted with some locals in our community. Through the course of the event, we often thanked our sponsors for their support, once again bringing them brand visibility and marketing for their brand on a large scale platform

/// Figure 3.3 | Images from Infinity Fest 2023 (Credit: Infinity Racing)

- Sponsor Pamphlets on Pit Display

  Pamphlets provide the brand and its message a physical manifestation. They provide a chance to highlight the sponsor brand's name, slogan, most important goods and services, and any current promotions. Pamphlets, in contrast to internet marketing, can be touched, read, and shared by attendees, enabling a more intimate and tactile engagement with our sponsors' business. Several people would stop at our pit display and read about our sponsors which, to our expectations, increased brand visibility.

/// Figure 3.4 | Pages from our Sponsorship pamphlets visible on our Pit Display

- Media updates

  Our team constantly updated our audience on our progress including new sponsors, renders of our car and upcoming projects.

/// Figure 3.5 | Digital media posts focusing on our sponsors and their support. (Credit: Infinity Racing)

4.2 /// SPONSORSHIP **REPORTS**

We created sponsorship reports for each of our partners in order to highlight our collaborative efforts with each
Below are Sponsorship Reports from KeyShot (In-kind partner), Lucky Investments (Premium Sponsor) and Corugami (In-kind partner).

KeyShot by Luxion — **IN-KIND PARTNER**

- *Brand Identity:* Technology, Innovation
- *Return on Investment:* Blog, Logo on digital media platforms and project deliverables.
- *Team Benefits:* Rendering features, High quality tools, Provided 2 two-month licenses.
- *Mutual Benefits:* Brand exposure to target audience (F1 in Schools teams), Software used and showcased across multiple deliverables, Simple to use rendering software license provided

LUCKY — ENCOURAGING INNOVATION — **PREMIUM SPONSOR**

- *Brand Identity:* Innovation
- *Return on Investment:* Largest Logo of all sponsors on car, uniform, portfolios, digital media platforms

- *Mutual Benefits:* Support for STEM education showcased, Helps develop a positive brand image, Brand exposure on global scale through numerous deliverables.

IN-KIND PARTNER

- *Brand Identity:* Innovation, Sustainability
- *Return on Investment:* Title sustainability partner, Logo on digital platforms, project deliverables and car
- *Team Benefits:* Provided Pit Display sustainable materials and printing
- *Mutual Benefits:* Products and services displayed on international stage, Showcased commitment to STEM education and sustainability, Sustainable materials for pit provided.

5.1 /// DIGITAL MEDIA **REACH**

In present times, social media has proven to be an extremely active platform for marketing and could be a ticket to success in the field of brand awareness and reach. We at Infinity Racing recognised this opportunity to engage with a much wider audience through online methods. By leveraging the reach and influence of digital platforms, we are able to connect, inspire and captivate a far greater audience. Engaging content and tactical marketing campaigns ensured that we could create connections with viewers and spread the team's identity to a much larger crowd.

8 DIGITAL PLATFORMS:

DIGITAL MEDIA STRATEGY

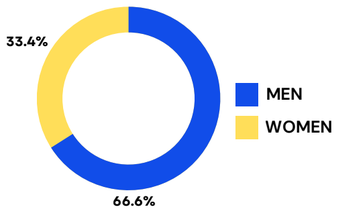

It was key to build a strong presence online through the Regional and National Finals also. The team managed to capitalise on this as early as possible, thus managing to build an active profile. However, we knew it was of utmost importance to continue growing our platforms consistently.

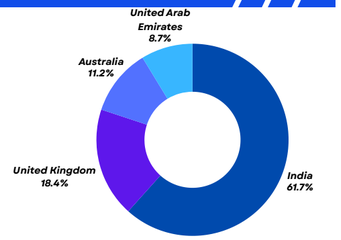

Our digital media strategy was straightforward yet extremely effectual. It comprised of three stages: Stage one involved a more detailed study into our target audience and truly understanding who our viewers were. Stage two was of utmost importance as we had to precisely pick which platforms we would choose to concentrate on. Stage three was where we had to understand exactly what caught our viewers attention and then maintain engagement with them throughout.

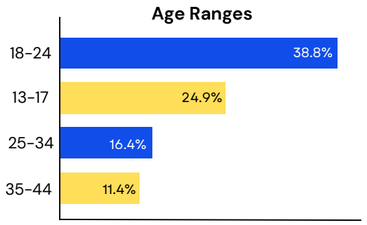

5.2 /// TARGET **AUDIENCE**

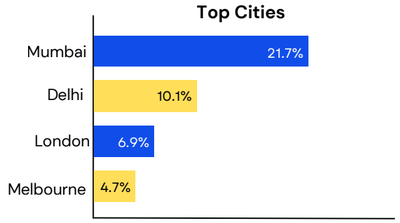

It was crucial to figure out who are target audience exactly was in order for our social media platforms to prosper. After a lot of discussion and dialogue all our team members settled on the fact that our followers most common features were: STEM interested or F1 enthusiasts usually in the age range of teenagers. This was confirmed by Insights we received from analysing and using tools available on our digital media platforms. We utilised various online tools to target this specifically narrowed down group, posting compelling content to gain maximum reach.

INSIGHTS AND ANALYTICS

5.3 /// PLATFORM **SELECTION**

Upon confirming who our target audience mainly comprised of we decided which platforms we could focus our content towards. Our main consideration for picking the online platforms were:

- Key Audience using the platform
- Content type
- Potential for account growth
- Potential outreach amount

Our Digital Media was split into two broad categories:

- Team to Company Engagement
- Team to Follower Engagement

Team to Company Engagement: In this category, we mainly wanted our content to reach the likes of current and potential sponsors and also major names in the F1 in Schools and motorsport Industry to gain reach to a corporate audience who can aid us in our project.

Team to Follower Engagement: In this category, the desired reach of our content was to interested viewers and supporters of our team, keeping them updated with the current situation of the team at all times by using varied content type, engaging followers and increasing reach.

5.4 /// AUDIENCE **ENGAGEMENT**

While we were brainstorming for our plans for digital media, we chose to make 'Engagement leading to Impact' the main goal we wanted to achieve. We inquired and interacted with several teams and focused on gaining knowledge as to how we could increase audience interest to its maximum capacity. Due to social media platforms such as Meta, Instagram, and Twitter taking the world by storm, and increasing in users joining every single second, we chose to display our projects and progress in the form of posts on these platforms. We made sure to update our accounts regularly which ensured that the team had a strong online presence.

Ever since we began our social media campaigns, several thousands of people have followed our journey as a team and shown deep interest in what we do. Furthermore, Insights and analytics on each platform helped us find optimum times to post to help bring in large amounts of audience who engage with our content. Using digital media tools we gained a thorough understanding of what type of audience we are attracting, including gender, age and location and specifically targeted them for maximum exposure of our team on all platforms.

We executed our scheme for engagement keeping in mind our goal which was 'Engagement leading to Impact.' As part of this, we held numerous activities on our media platforms including Q&As , Trivia Tuesdays, Throwback Thursdays and Giveaways. These were not only creative and engaging methods which worked well for our team, but also gave our enterprise a wider audience to cater to. This also aided in giving our viewers and followers important information regarding the F1 In Schools competition and our team in the form of updates which depicted our progress through the journey.

5.5 /// DOCUMENTED PLANS: **EXECUTION**

Documented plans were made for clear execution of digital media content since a range of platforms were used proactively. The key features of each platform such as Instagram, X, LinkedIn etc. were unique therefore the type of content posted on each platform differed.

The Execution Plan included type of content, caption, tags and time interval between posts. Captions were pieces of information we included before posting content which helped users understand what content was uploaded. Tags were additional hashtags used to increase our reach on the platforms and were a unique strategy used by our team.

An example of a documented Execution Plan is given on the right side for the platform Instagram

EXECUTION PLAN 2024

PLATFORM: Instagram

Content Type	Caption	Tags	Time interval
'We are Back' (Post)	"We are Back" (Explain further)	#return #flinschools #nationals	-
"Throwback to World Finals (Post)	"A look back to exactly one year ago..."	#throwback #tbt #WF23	7 days
F1 in Schools Quiz (Story)	"Question & Answer"	#quiz #q&a #flinschools	2 days
Revealing Sponsors (Post & Story)	"Revealing our sponsors for the 2024 Nationals..."	#sponsor #reveal #flinschools	Every 2 days
Car Reveal (Reel, Post, Story)	"Revealing the INF24 for the 2024 Nationals..."	#carreveal #INF24 #flinschools #nationals	5 days

DIGITAL MEDIA PLATFORMS

6.1 /// INSTAGRAM

564 1,555 5,897

This was a unique platform which allowed us to connect to both firms as well as engagers. On Instagram, we focused on Team to Follower engagement and strategised our content towards this direction. The posts were perfectly tailored to be engaging and intriguing in order for new viewers who were unaware to catch their attention and to also attract interested firms. We mainly focused on getting as many views as possible as outreach to numerous individuals was crucial. Insights on Instagram helped us to gain more knowledge about our target audience and helped in narrowing it down to finer categories. We noticed that our accomplishment posts and our car launch reels had performed the best by far.

TOP POSTS

91 10 9

OVERVIEW

*Total Impressions : **682***
*Accounts Reached : **489***
*Accounts Engaged : **103***

6.2 /// TWITTER

25 105 1,166

Twitter allowed our content to be displayed in the text format as it is a text-based interface. In terms of twitter we had the expectation of exponentially increasing our following to extremely high numbers due to the increased popularity of the platform. To ensure the growth of our account we updated our page after every project we performed and progress that we made in the form of tweets and increased engagement via retweets. Using this platform we successfully widened and diversified our audience. We primarily catered to Team to Follower engagement on Twitter as a digital media platform. Our team gained a growth of 13% on our account on an overall basis of our engagement through all digital media platforms.

TOP POSTS

29 4 223

OVERVIEW

*Total Impressions : **682***
*Accounts Reached : **489***
*Accounts Engaged : **103***

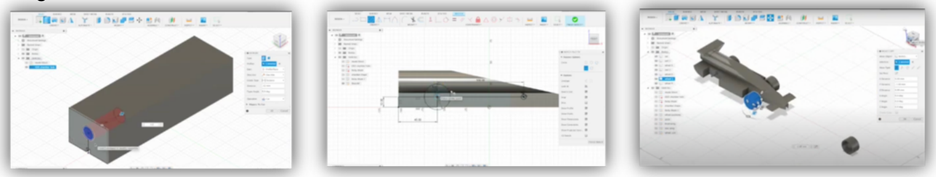

6.3 /// LINKEDIN

LinkedIn is another platform we have made an appearance on. We mainly utilise this application to connect with our Team to Company audience and use it as a corporate platform. Our team also gained sponsors using LinkedIn. Another main function of this platform is as a member of the LinkedIn network, we have the option to join groups with others who share our interests and goals in this particular field. Moreover, by participating in various discussions, asking questions, commenting on postings, and other activities, these groups enabled us to network with other individuals and professionals who are already experienced in our sector.

6.4 /// YOUTUBE

19 27 172

YouTube was one of the primary medias that we focused on, uploading quality content, but still considering it a rather casual and amusing medium to interact and express to our audience. We launched basic tutorials and also utilised YouTube Shorts to create short timed videos which are preferred and fun to watch compared to longer representations of our work. We posted our progress through the months as well as the multiple projects that we created. YouTube helped our team to boost our following tremendously and reach a larger audience.

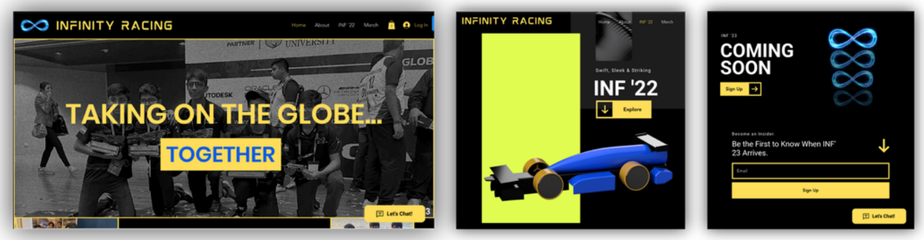

/// Figure 4.1 | Tutorial on Youtube regarding how to design a basic F1 in Schools car. (Credit: Infinity Racing)

6.5 /// WEBSITE

450+

Our website served as a central storage of information and a host of multiple links for other social media platforms. It helps to introduce, educate and provide details to our viewers about the team. We used the Wix platform for the building of our website, using attractive fonts and visuals in order to captivate the attention of those who visit the website. The website also serves to promote our sponsors, hence marketing for those who have provided us with funds.

/// Figure 4.2 | Infinity Racing's official Website's home and about the car pages. (Credit: Infinity Racing)

6.6 /// E - MAIL

E-mail was a platform we used for connecting with our audience and sponsors in a formal and corporate manner. We provided monthly updates to our supporters and sponsors via an email newsletter which was accessible through our website as well as for users to sign up if they choose to. The use of an email domain helped maintain professionalism and was useful for interacting in a corporate manner. We focused on both our Team to Follower as well as Team to Company engagement via email. We analysed user engagement on our newsletter by seeing how they interacted with our mails giving us ideas on where to direct our content for the newsletter to increase our reach and engagement.

6.7 /// FACEBOOK

15 27 194

Posting our progress on Meta (Facebook) was extremely important for our team. Due to its massive and powerful following and members with around 2.9 billion people active on the platform, we had high hopes to increase and expand our audience. This interface enabled us to share photos and videos, We developed a content strategy that focuses on creating and sharing engaging content on Facebook. This included team updates, behind-the-scenes footage, interviews, highlights, and other content that resonates with our target audience. Consistently sharing valuable content will encourage our engagement, increase organic reach, and attract new followers.

6.8 /// SPOTIFY

26 7 496

Uploading on Spotify was a key decision for the progress of our team. We took part and created podcasts with other teams taking part in the competition, which we named 'STEAMing Ahead'. This helped us tremendously as we gained insights into other teams and knowledge as to how to fix aspects we as a team lacked on. We hosted Zoom Meetings including competition related conversations and a question and answer session with teams around the globe which gave us an international perspective on STEM. We promoted our projects using this interface which acted as a vehicle for our followers to stay tuned with our new ideas. Using this audio-based platform we increased our engagement with our audience by high numbers and aided them in following our progress

/// Figure 4.3 | Spotify podcast and scannable barcode for STEAMing Ahead

OVERVIEW

7.1 /// SUSTAINABILITY **STRATEGY**

Our strategy was simple. We pertained to the Sustainability Development Goals with an aim to cover all the aspects in terms of environmental, economical and social sustainability.

We figured that while doing sustainable campaigns we also wanted to reach to a wide audience, spreading awareness on the importance of sustainability in today's world. For this, the launch of our EcoInfinity sub-brand was essential and we successfully merged our sustainability and marketing strategy to reach a large audience.

To increase our reach, we encouraged our partners to collaborate with us and market for our EcoInfinity sub-brand. We catered to an extremely large audience via digital media through our partners at Corugami and Ansys regarding sustainability and our contribution to it.

7.2 /// ENVIRONMENTAL **SUSTAINABILITY**

Environmental Sustainability refers to the capability of maintaining an ecological equilibrium in the planet's environment, with its primary objectives being the conservation of natural resources, preservation of global ecosystems, and the promotion of the health and wellbeing of present and future generations. The exponential growth in the global population has led to a significant increase in greenhouse gas emissions and deforestation. Furthermore, the rapid expansion of industries and technological advancements has substantially augmented the demand for energy, consequently exacerbating the effects of global warming on a global scale. As such, the promotion of environmental sustainability by firms has become paramount. Infinity Racing is steadfast in our commitment to adopting and advocating environmental sustainability practices across multiple regions.

SUSTAINABILITY CAMPAIGNS

7.3 /// OUR BOOK: **INFINITE PLANET**

We took the initiative of writing our very own book called "Infinite Planet" relating to the topics of sustainability. We mainly focused on environmental sustainability, spreading awareness on the topic and its aspects relating to STEM and motorsport. We also brought insights from our sustainability partner, Corugami aiding in ROI. The book, in the form of merchandise, was purchased by many F1 in Schools teams introducing them to sustainability and its importance in the F1 in Schools competition. However, we also brought in audience from our schools as purchasers, spreading social awareness about sustainability on a large scale.

7.4 /// 100% ECO-FRIENDLY **PIT DISPLAY**

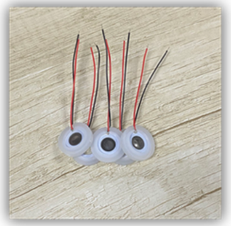

Every year, Pit Displays get more advanced resulting in higher costs due to used up resources. Our entire Pit Display was a 100% recyclable and sustainable, thanks to our partners at Corugami. They provided our team with recyclable cardboard which we would return to them after using it for our Pit Display.

/// Figure 5.1 | Image of 100% sustainable cardboard received from our partners at Corugami

7.5 /// PIEZO **TECHNOLOGY**

Piezo chips are a simple nanotechnology which generates electricity when pressure is applied on them. By utilising these small chips we transformed mechanical vibrations produced by our hands on pressing them, into electric energy, ensuring a continuous and sustainable source of energy. Usually, all the electric compliances in a pit display use up a lot of electric energy, hence not proving to be a sustainable way to power the pit. Therefore, we have used Piezo chips to provide the required electric energy to power all of the electric components of the display, not using any conventional power sources. By harnessing the power of Piezo technology, we showcased our commitment to eco friendly practices and promoted sustainability.

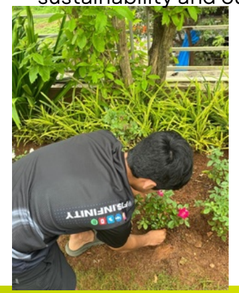

/// Figure 5.2 | Images of Piezo chips used in Pit Display

7.6 /// ECOINFINITY **GARDEN**

On average, trees across the globe offset around 44 pounds of Carbon Dioxide each year. For the past year of our World Finals campaign, we developed our very own EcoInfinity garden in our society featuring beautiful and varied species of plants and trees over the duration of the competition.

As per our research, we found out the Teak tree is responsible for most absorption of Carbon Dioxide. The Teak tree is available in most of India largely in our state, Maharashtra. In our EcoInfinity garden, we planted 5 Teak trees and numerous other plants and flowers including Meadow Lilies, Hibiscus, Areca Palm and many more. Our aim was to reduce carbon emissions and create a beautiful Eco garden to pique our society's residents. We also installed small wooden stands giving critical information on our plants and details about our sustainability project, aiding in spreading social awareness regarding sustainability and our project.

8.1 /// ECONOMICAL **SUSTAINABILITY**

SUSTAINABILITY CAMPAIGNS

8.2 /// REVERSIBLE **MERCHANDISE**

Our team had noticed that the amount of profit margin on each shirt was not the amount that we desired. It was imperative to find a manner in which we could increase our profits on every sale while still keeping our customers satisfied with their product. Therefore, we decided to begin printing reversible shirts. What these essentially were, is that they had print on both sides of the shirt, unlike a regular shirt which would be printed only on one, and hence could be worn both ways.

In this way, we saved a great amount of funds that would have otherwise been spent as we had to buy just a singular shirt instead of two, which may or may not have been sold to the same customer. In this way we also reduced the waste disposal, instead of two pieces of clothing only one would be discarded, helping out in terms of the environment as well. Hence, the innovation of reversible merchandise aided us in terms of economic and environmental sustainability.

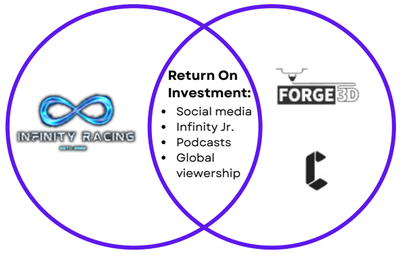

8.5 /// CIRCULAR **ECONOMY**

Bearings are one of the key components of the car, and the importance of them cannot be understated. However, they come at a hefty cost, not only the price of the product but also the cost of shipment due to the difference in our location and our suppliers, ABEC357. We noticed that the bearings that we had used in the National Finals were in almost perfect condition and could be reused. Therefore, for the track testing of our prototypes we made use of these bearings. By doing this, we saved a large amount of funds that would have otherwise gone into buying brand new bearings, which would punch a big hole in our budget. This also proved to be another one of our sustainable practices as we were significantly reducing the amount of waste which was being generated by our project.

8.3 // SOCIALLY RESPONSIBLE **PARTNERSHIPS**

Infinity Racing supported local businesses by partnering with them and promoting them through our social media platforms and creative Return on Investment methods. By partnering with a local business, we reduced carbon credits which would be generated for the shipping of freight.

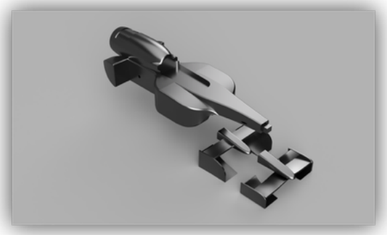

We partnered with Forge 3D, a 3D-printing agency in Mumbai via a technical partnership. and Corugami, via a sustainability partnership. Through our Infinity Junior campaign, we encouraged rookie teams in our country to approach Forge 3D for their printing requirements. We promoted Forge 3D to a large audience which also consisted of global viewership, promoting the brand on a much greater stage.

/// Figure 6.1 | Return on Investment for socially responsible parterships with Forge 3D and Corugami (Credit: Infinity Racing)

8.4 /// MODULAR **PROTOTYPES**

We needed to keep expenditures as minimal as possible so that we could use the funds which we saved in other departments or even to keep our budget intact. We developed our body and bearing housing designs first and printed them immediately. We discovered after printing these parts that they could be utilised continuously for testing every other component. Since these components were already prepared, we made the decision to use them to test out all of the prototypes by attaching them to these parts, like our front wing, rear wing, sidepods, rear pods, and wheels. This was quite helpful to us because it allowed us to avoid spending money by simply printing the parts of the car we wanted to test out, as opposed to printing the full car again. Additionally, as a result of this, we generated substantially less waste and used our resources in an efficient manner.

/// Figure 6.2 | Use of modular prototypes by testing two front wings on one body (Credit: Infinity Racing)

Social sustainability is integral in our F1 in Schools team's values. We understand the influence of businesses on people and communities. By responsibly addressing these impacts, we contribute to positive social development. Prioritizing inclusivity and equitable opportunities in our team's journey aligns with fostering a just and compassionate society. This approach enhances our team's growth and contributes to a brighter future for all.

SUSTAINABILITY CAMPAIGNS

8.7 /// SOCIALISING WITH **FOLLOWERS**

A stakeholder group which we deviated a lot of attention towards was our supporters which consisted of not only our followers but also those who were supporting us through the competition, our sponsors. We strove to create a strong sense of togetherness in our online community which mainly consisted of likeminded people with a keen interest in motorsport and STEM. Therefore, we created an Instagram community, where we consistently posted updates about the team's progress and the competition in general as well. We were also keen to form partnerships with companies that themselves promoted sustainability and were majorly involved in CSR (Corporate Social Responsibility).

8.8 /// SOCIALISING WITH **COMMUNITY**

The final stakeholder group that we had was the wider community. Our primary goal in this was to promote F1 in Schools amongst students, and encourage them to potentially participate in the competition. Being a collaborative team and all members being of different schools, we were able to promote the competition in six different schools. We held events in all of these locations by which we spread the awareness of this competition to huge audiences. We were glad to see that our efforts had an impact as it resulted in the formation of two new F1 in Schools teams that will be participating in the future.

8.9 /// MONTHLY **BEACH CLEANUPS**

As part of our EcoInfinity campaign, we conducted monthly beach cleanups at one of the biggest beaches in Mumbai, Juhu Beach. We collected waste which was disposed on the beach such as bottles and bags. In order to promote the appropriate disposal of waste, we set up multiple trash cans along the beach which had our logos on them to promote our brand. . We put up banners of our team on the beach as well which resulted in the promotion of the competition and encouraging others to participate.

/// Figure 6.3 | Images of our beach clean up (Credit: Infinity Racing)

9.1 /// TEAM **NAME**

The team name helps to give the team a unique identity, and is the face of our team. While thinking of a team name, we kept in mind our team's philosophy which is based around three pillars; Innovation, Teamwork and Perseverance in order to achieve endless glory. Using these principles and after running through various potential names for our team, we decided on a name that defined endlessness, boundlessness and limitlessness, 'Infinity'. Our team also considered multiple other options including 'Infinitude', 'Team Limitless' and many others however these options were either unoriginal or disliked by our team members.

On our name, we also appended the word 'Racing' which we believe gives the audience an idea of what our team is about. 'Infinity Racing' was a good choice which stipulated our team philosophy and expressed our creative team and our overall brand.

9.2 /// TEAM **COLOURS**

Colors are an extremely important part of any team. Team colors help create a sense of identity and unity among our team members and followers. Our team colours represent:

Blue: Blue is often associated with feelings of calmness, tranquility, and serenity. It can evoke a sense of peace and relaxation, which can be critical in moments of stress and help overcome obstacles. It also relates to the term of sustainability while representing a necessity like water.

Yellow: Yellow is frequently linked to joy, happiness, and optimism. It can instill a sense of optimism and vigour, illuminating a room or enhancing our mood. We believe that a positive mind helps us progress at a faster rate at a higher quality.

Infinity Gradient: The infinity gradient is key in representing how the enterprise and the engineering sector of building a car merge into forming one singular united team. It also shows how we as a team have a large amount of focus on both the sides to build the perfect car and portfolio.

9.3 /// TEAM **LOGO**

In addition to the team name, the team logo also plays a pivotal part in defining our team identity. Our team's philosophy also had to be embedded in our team logo. Various factors were considered in order to create a logo that incorporated our team brand and vision. Our logo is geometrically balanced, featuring the common infinity logo and our colour scheme. The common infinity logo was used as it is easily recognisable amongst our viewers. Below our logo is our team's name in the 'Mokoto Glitch' font, since it helped in giving our team a high-tech look in order to make it identifiable that we are participating in the world's largest STEM competition. Furthermore, below our name we also included the 'ESTD 2022' text so viewers can understand when our enterprise had been established and delivers a more corporate and professional look.

/// Figure 7.1 | Infinity Racing's official logo (Credit: Infinity Racing)

The common infinity logo is also a depiction of a horizontal eight. In our country, India, it is believed in multiple cultures that eight is an auspicious number while the infinity symbol represents good luck and fortune. The logo symbolises the idea that nothing proceeds from infinity and that even the idea of something proceeding from infinity is still infinity.

9.4 /// TEAM **MERCHANDISE**

We created several types of merchandise incorporating our logo, colours and brand features. This helped in heavily boosting our team identity. It also added a sense of personalisation to our team which we previously lacked. Hoodies, cups, and books are just a few of the items we created and we expect it to bring great success to our team. Not only did this help us in team identity but also aids us in the marketing aspect of our team. This is because we have listed these products for sale by creating an online store and engaging in e-commerce using dropshipping fulfilment.

/// *Figure 7.2 | Images of team merchandise (Credit: Infinity Racing)*

9.5 /// THE **BRAND GRAPHICS**

To further increase the brand presence, we incorporated graphical brand features which we included through our digital media, portfolio templates, car and other project deliverables. We made sure that these graphical elements fit well with our overall team identity including our logo and team colours. We used four key elements that could be applied throughout our project that developed our overall team identity. We made these features prominent so our audience can identify us in a much easier manner rather than only referring to our logo, as an emblem to our identity.

/// *Figure 7.3 | The five key graphical brand features used. (Credit: Infinity Racing)*

9.6 /// THE **TEAM UNIFORM**

Uniforms at the World Finals are of extreme importance as they showcase our team's brand to all. It contains our team's name, logo, colours, graphics, sponsors, individual names and roles. Our uniform design was attractive, professional and easily identifiable in order to create an everlasting impression on those who view it.

- Sponsor ROI through logo placement on uniform
- Create a strong team identity
- Enhance the team's professional image
- Suitable for the humid Singaporean climate

We created two uniforms, one travel tee to be used on the journey and one polo shirt to be used throughout the event. The travel tee was made of a dri-fit material due to its comfort and to give a professional look while the polo shirt was made of cotton due to convey a more corporate look.

Furthermore, to complete our attire we added black track pants so they could match with the team colours and the uniform and further add a sense of professionalism in our attire style. Black shoes were selected as the footwear which also complement our team colour and our overall team identity.

10.1 /// INFORMATION & LAYOUT

The layout and every piece of information on our pit display was taken extremely seriously by our team to maximise engagement by passers. Prior to creating our pit display we identified the most appropriate positions to place our content. Our main goal was to enlighten the participants and judges of the origin and actions of Infinity Racing. We also strive to provide brand visibility for our sponsors. The existing National Finals Pit Display was assessed against these criteria, showing satisfactory performance. However, particular areas were identified as key for improvement.

We started our design process by evaluating our National Finals Pit Display. We identified possible constraints like size, time, resource and transport. By evaluating each of the constraints and using the *ACCESSFM* model, we developed prototypes of initial Pit Display concepts which were then assessed. This aided us in finally creating our final Pit Display for the World Finals.

CONSTRAINT ANALYSIS

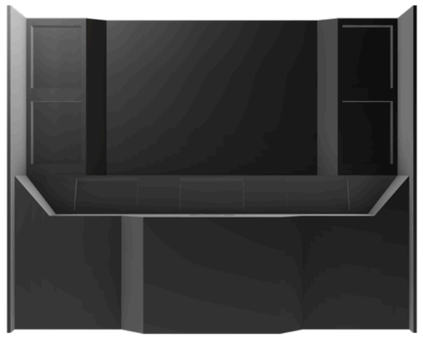

CRITERIA	DESCRIPTION	METHOD OF CHECKING
Time Constraint	A limited time of 2 hours is available to build the Pit Display. If not followed, can lead to a sizeable penalty	Time trials can be conducted and an estimate time can be calculated according to manufacturing guidelines
Size Constraint	According to fixed regulations, all contents of Pit Display should be within the ser size (3x1x2.4 m)	3D CAD model is within the Pit Display set space with no contents outside the area
Transport Constraint	Easy transportation is required to avoid any damage to Pit Display materials	Note size of total packed materials and mobility and strength can be tested with small tremors
Cost Constraint	The Pit Display should be made keeping in mind the team's economic status	Estimate cost of Pit Display can be calculated according to materials used
Aesthetics	The Pit Display should be visually appealing with appropriate amount of information and technology for viewers	Rendering tools and feedback from mentors and graphic designers
Environment/ Sustainability	Prevention of exploitation of resources and spreading awareness on sustainable practices and technology	Inspection of manufacturing process and Supply Chain can be assessed
Team Identity	Use of all brand features to make the Pit Display easily distinguishable along with sponsors	Visibility of brand and sponsor features around the Pit Display
Technology/ Innovation	Integration of technology and innovative ideas making the Pit Display unique and vibrant	Identification and evaluating of various innovative concepts. Feedback from viewers regarding use of technology

ACCESSFM MODEL

	NATIONALS	PROTOTYPE 1	PROTOTYPE 2	FINAL
				
AESTHETICS	8	8	8.5	8.5

CUSTOMER	7	8	7.5	7.5
ENVIRONMENT	6	7	8.5	10
SIZE	8	6.5	8	7
SAFETY	8	8	7	7.5
FUNCTION	7	7.5	8.5	8
MATERIAL	7.5	6.5	7.5	9

10.2 /// TEAM IDENTITY

Each project of our team included all the parts of our team identity such as team colors and our team logo. We find this important as our projects will stand out and be instantly recognisable among those of our competitors or partners, if our team has a strong team identity with distinctive colours and logos. Professionalism and credibility are communicated through a well-designed team identity, which is key to our team. We utilised our colors and logo in our products as well, so when customers view our merchandise on our pit display, they will quickly link them to our team and its initiatives, boosting brand recall and awareness.

10.3 /// INTEGRATION OF TECHNOLOGY

A new discovery for our team was the Piezo chip. A nanotechnology where, when pressure is applied energy is generated. We utilised this in powering our pit display panels in terms of electricity and lighting. This was primarily integrated in our Pit Display due to its major sustainability component.

We made the use of three monitors to provide an interactive platform for attendees. We noticed that simply adding information on our panels wasn't enough, hence we integrated monitors as a visual aid to showcase videos and images to passers.

We utilised a rotating disc to display our car from all angles. The disc automatically moves in a circular motion giving a thorough look of our car. A rotating disc enables all the minute details and features to be showcased, as a 360 degree view is available. The car is also placed in a resin dome, hence allowing all components of it to be viewed easily.

10.4 /// USE OF MULTIMEDIA

In terms of visuals we made use of monitors to depict our design and enterprise aspects. We utilised the central monitor in our pit display to showcase the details and features of our car as well. Due to its aesthetic appeal to both direct users and bystanders, video was chosen as the most common multimedia format across our display.

To create an interactive platform for attendees and judges we installed digital buttons. These buttons can direct you to any specific page on any one of the three monitors. The use of buttons allows viewers to select multiple topics under both the enterprise and design aspect of our project on the monitors. This will be extremely convenient in terms of increasing efficiency for the viewers on our display.

10.5 /// MARKETING MATERIALS

We included numerous marketing materials on our Pit Display to showcase the team's marketing and showing maximum exposure of our sponsors through their brand marketing.

The main marketing materials for the team included:

- Team Logo placed in front of display in large
- Team Merchandise displayed
- Team car displayed in the centre

Sponsor marketing materials done by:

- Placing sponsor logos on pit panel
- Sponsor pamphlets handed out to viewers of pit display
